Details of the event:

Computer Engineering Department organized an Add-on/Certificate Program on German Language which is start from on 08<sup>th</sup> October 2022 on weekend i.e. Saturday and Sunday for two hours each at sharp 10:00 am for SE Students of Computer Engineering. The lecture was headed by Prof. Gauri Gugale who is German Language Expert and work as trainer in ITESKUL institute.

In German Language course student learn the German *alphabet* which contains notable differences when compared to English, but it's not tremendously complex to learn if you have already been writing or reading using the Roman alphabet. German *phonetics* is a bit more challenging as it contains different phonemes and special vowels that influence pronunciation and are not represented in many other European languages. In Germany the alphabet has 26 letters, 3 German umlauts (Ä, Ö, Ü) and one ligature (ß). Some letters are pronounced very similar to the English pronunciation, but some others are a little different.

letters, 3 German umlauts (Ä, Ö, Ü) and one ligature (ß). Some letters are pronounced very similar to the English pronunciation, but some others are a little different.

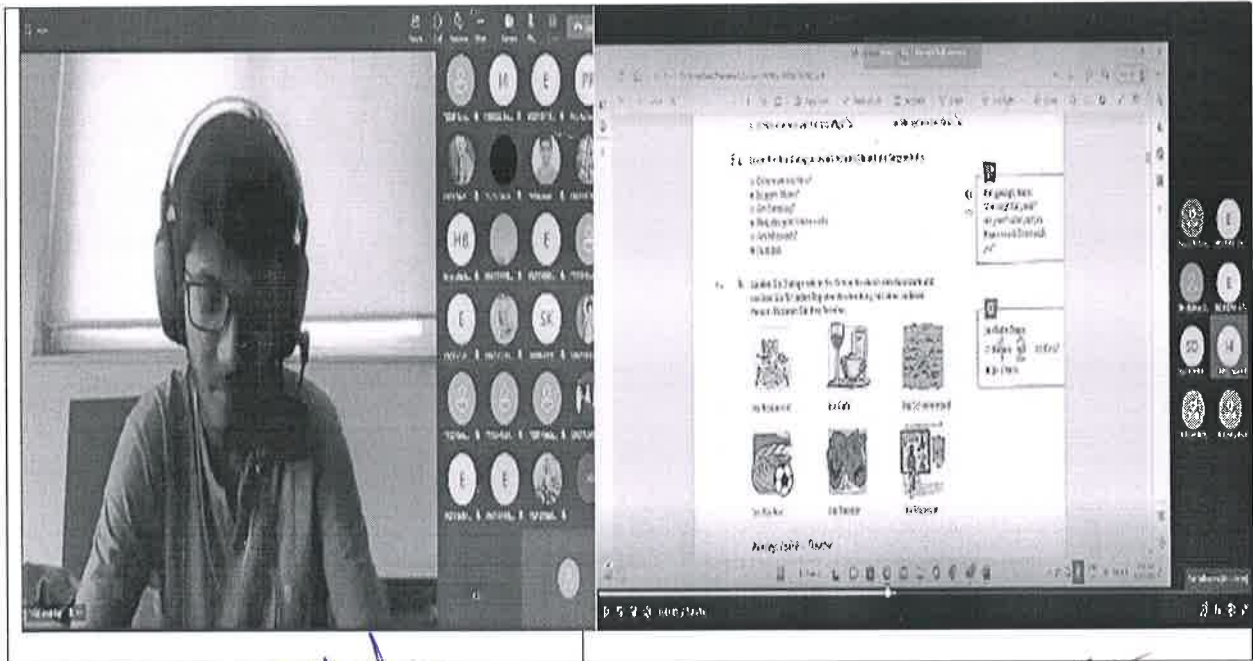

Just listen many times to the German letters and the sounds will become familiar. Also, don't get confused by our special letters ä, ö, ü and ß.

### Basic German Phrases

- Guten Tag = Good morning.
- Hallo = Hello.
- Ich heiße ... = My name is ...
- Sprechen Sie Englisch? = Do you speak English?
- Wie heißt du? = What's your name?
- Wie geht es dir? = How are you?
- Gut, danke = Fine, thank you.
- Nett, Sie kennen zu lernen = Nice to meet you.

Standard German sentence structure: **SUBJECT + VERB + MORE NOUNS + MORE VERBS**. The 2nd pattern (inverted) very simply swaps around the **SUBJECT** and **VERB**, primarily when asking a **YES / NO** question: **VERB + SUBJECT + MORE NOUNS + MORE VERBS**.

## Department of Mechanical Engineering

During entire course AMS Team shown actual demonstration of reverse engineering i.e. scanning of mechanical component, 3D Model creation by from scanned data (point cloud), 3D model development by CAE tools, simulation etc. Also they showed how to develop a prototype by using 3D printing technology by scanning existing part of which CAD data is not available.

They also demonstrated advanced metrology instruments like Portable CMM (PMT Alpha P, M, E Models), 3D Laser Scanners (Hand Scanners, Long Range Scanners), Laser Trackers (Faro, API, Leica Absolute Tracker etc.), Metrology Softwares like CAM 2 Measure.10, Geomagic Polyworks, Power Inspect.

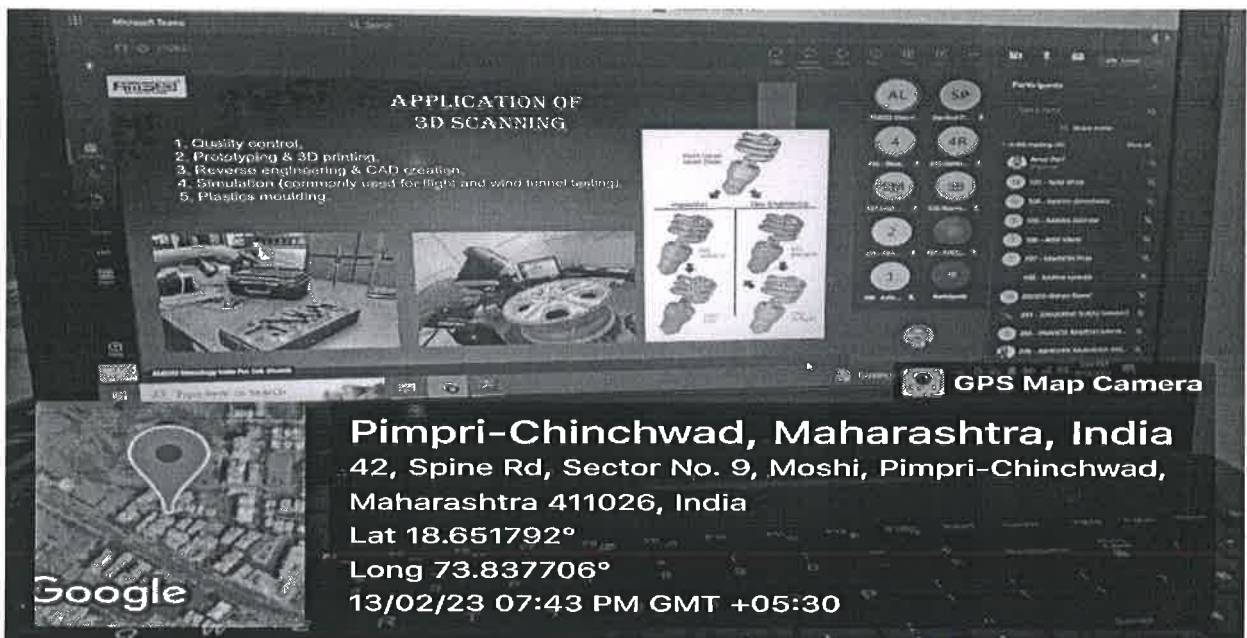

Lastly they shown how to scan entire plant/building/structure to create same replica at another location i.e. plant simulation which comes under digital manufacturing domain.

AMS team conducted a physical hands on training session of 6 hours at ADYPSOE seminar hall with all equipments. Students were enjoyed while learning this advance 4.0 technology.

All 54 Students were very curious while learning and asked different queries related to this technology. AMS 3D team solved all minute queries of students. Students were satisfied and confident while grasping this innovative technology and its demonstration.

At the end of the day of entire training session, program concluded with Questions and feedback from students and vote of thanks by Event Coordinator.

**WHAT IS 3D SCANNING ?**

3D laser scanning is a non-contact, non-destructive technology that digitally captures the shape of physical objects using a line of laser light. 3D laser scanners create "point clouds" of data that map the surface of an object. In other words, 3D laser scanning is a way to capture a physical object's exact size and shape into a computer-readable or digital 3-dimensional representation.

3D laser systems measure fine details and capture free-form shapes to quickly generate highly accurate point clouds. 3D laser scanning is ideally suited to the measurement and inspection of complex surfaces and complex geometries which require massive amounts of data for their accurate description.

3. To analyzed a G+5 Structures with calculating its number of bars, area of steel and spacing of bar
4. To provide the steps about the Design of Earthquake Resistant structures like Shear wall

**Program Outcome: -**

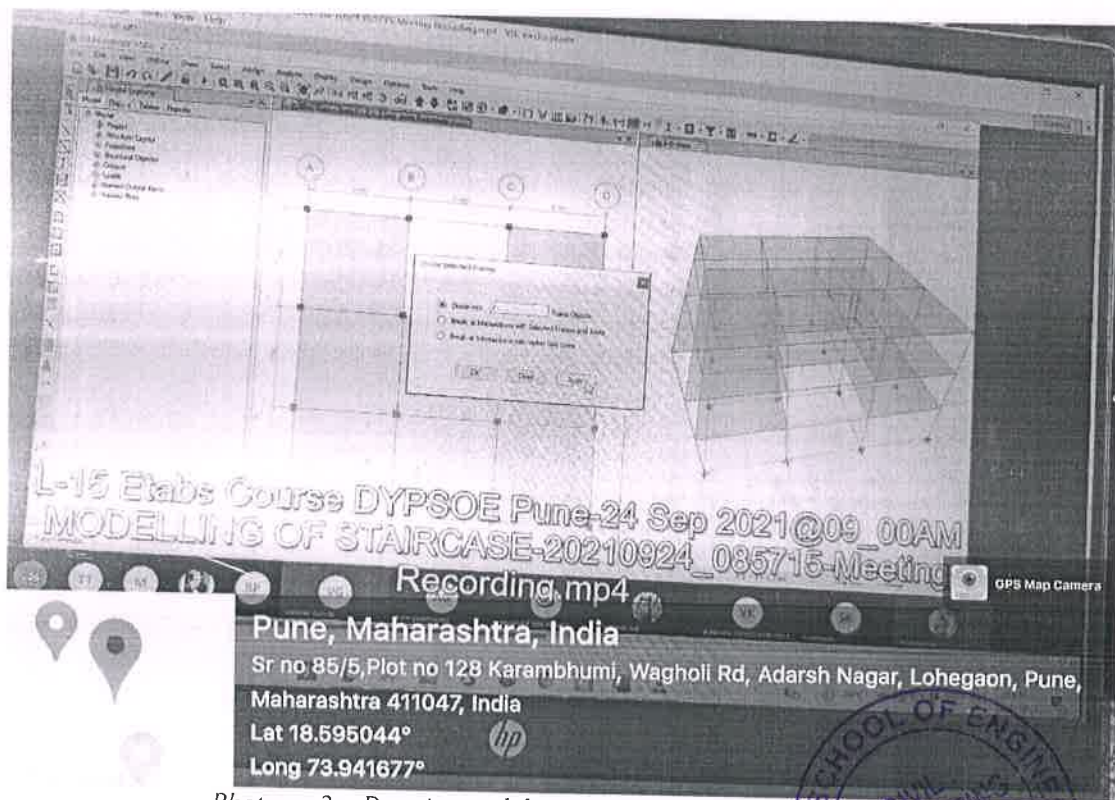

1. Understand all the drawing tools and design tools of any simple beam or compound beam
2. Understand all the drawing tools and design tools such as Define, Assign and selection of the section for applying any type of load in RC Structure.
3. After understanding the tools related to RC Structure participants were able to design steel structures like roof truss, frame structures etc.
4. Understand the Seismic Analysis by using Linear Static Method , Response spectrum method , Time history anlysis of Shear Wall or other earthquake structures.

It was good learning something new. It would have been more fun If it was offline classes

Wasn't such just the timings

Please keep timing of class @ 7 or 8 pm in the evening or In the morning @ 8:30 am minimum.

None

Pls arrange these type of courses. They Gives more knowledge.

Try to take it physically

Thank you for giving us the opportunity to learn something new, and hope to learn from you a lot in near future.

Take one lecture on job oriented softwares of civil engineering.

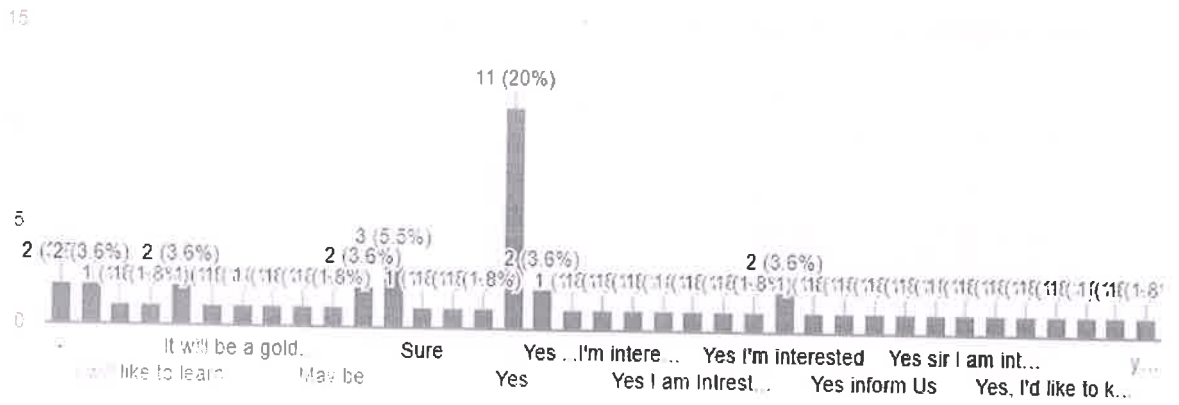

Nice Content

The interactive session allowed students to engage directly with Ms. Khandekar, addressing their specific questions and concerns.

Event ended with feedback and vote of thanks.

### Report:

ACE had organized add on course on “Employability Skill Development” From 1<sup>st</sup> July 2019 Monday to 6<sup>th</sup> July 2019 Saturday at 10:30 am to 5:00 pm. The session was started by ACE Coordinator Prof. Yogesh Mali, and then it is followed by Mr. Kushal Sharma founder of Inspiring Indeed InfoTech. While speaking about employability he started with the Annual Employability survey 2019 report by Aspiring Minds-Business today reveals that 80% of Indian engineers are not fit for any job in the knowledge economy. 80% of people spend 2+4+ unknown number of years in up skilling and spend stressful lives. Then during the session he covered up with following points.

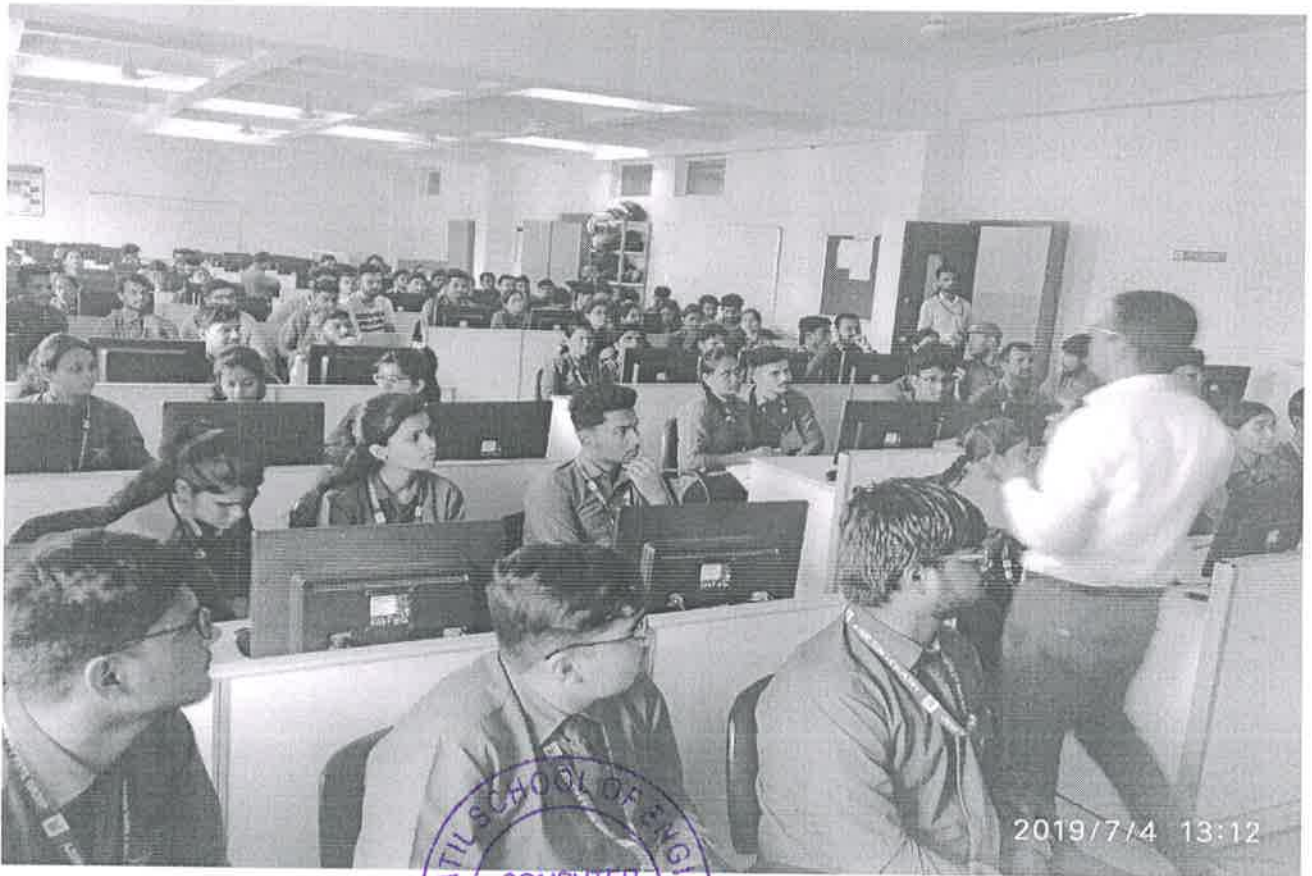

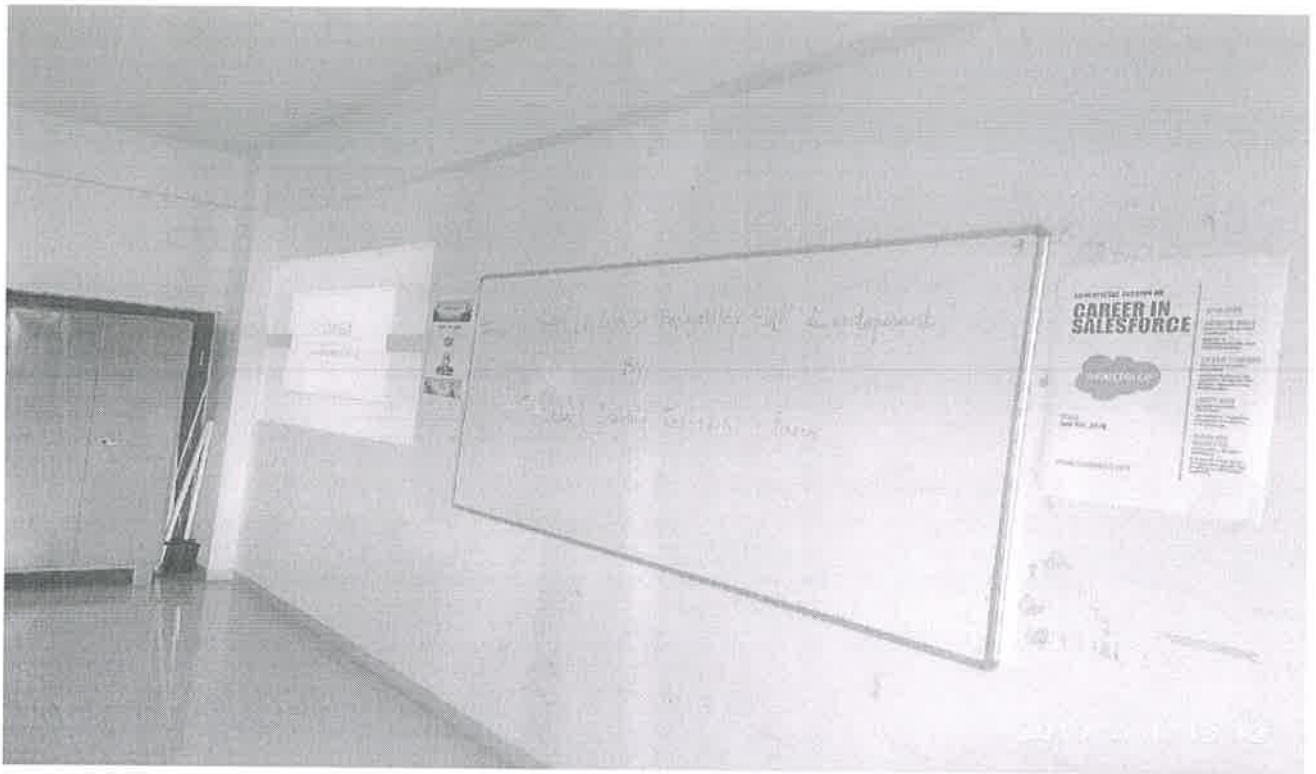

1. Importance of Employability & how to achieve it
2. What are the path of career
3. Three major areas of Success Business Analytics, Cloud, Application and Software Development
4. Entrepreneurship
5. Mentorship for Final Year Projects (Topic and Domain)
6. Internship Opportunity
7. Job Opportunity

The students exhaustively kept the session communicating by asking the entire question related to employability and project development.

The session were supported and monitored by HoD of Computer Department, Dr. Pankaj Agarkar and ACE Coordinator, Prof. Yogesh Mali.

#### **Event Contents:**

##### **Activity 1**

##### **Add on course on 3D Printing**

The 3D printing process builds a three-dimensional object from a computer-aided design (CAD) model, usually by successively adding material layer by layer, which is why it is also called additive manufacturing, unlike conventional machining, casting and forging processes, where material is removed from a stock item (subtractive manufacturing) or poured into a mold and shaped by means of dies, presses and hammers.

The term "3D printing" covers a variety of processes in which material is joined or solidified under computer control to create a three-dimensional object, with material being added together (such as liquid molecules or powder grains being fused together), typically layer by layer. In the 1990s, 3D-printing techniques were considered suitable only for the production of functional or aesthetic prototypes and a more appropriate term for it was rapid proto typing. As of 2019 the precision, repeatability and material range have increased to the point that some 3D-printing processes are considered viable as an industrial-production technology, whereby the term additive manufacturing can be used synonymously with "3D printing". One of the key advantages of 3D printing is the ability to produce very complex shapes or geometries, and a prerequisite for producing any 3D printed part is a digital 3D model or

a CAD file. The most-commonly used 3D-printing process (46% as of 2018) is a material extrusion technique called fused deposition modeling (FDM).

The term "3D printing" originally referred to a process that deposits a binder material onto a powder bed with inkjet-printer heads layer by layer. More recently, the popular vernacular has started using the term to encompass a wider variety of additive-manufacturing techniques such as Electron beam melting and Selective laser melting.

In the current scenario, 3D printing or Additive Manufacturing has been used in manufacturing, medical, industry and sociocultural sectors which facilitate 3D printing or Additive Manufacturing to become successful commercial technology. More recently, 3D printing has also been used in the humanitarian and development sector to produce a range of medical items, prosthetics, spares and repairs. The earliest application of additive manufacturing was on the tool room end of the manufacturing spectrum. For example, rapid prototyping was one of the earliest additive variants, and its mission was to reduce the lead time and cost of developing prototypes of new parts and devices, which was earlier only done with subtractive tool room methods such as CNC milling, turning, and precision grinding.
